SPORT IDENTITY: THE GENDERED BODY AND GENDER PRESENTATION IN GREEK MYTHOLOGY

The mythological depiction of the nude male body in Greek mythology is a central aspect of the orphic tradition. The orphic concept of the body is closely intertwined with the idea of transformation and the potential for spiritual elevation. The orphic myth of the panspermic body, which is seen as the ideal body type, is characterized by its perfect proportions and idealized form. This body is often associated with the god Orpheus, who is said to have possessed such a body, and it is considered to be a symbol of the ideal human body. The orphic concept of the body is important in understanding the orphic tradition and its influence on later developments in Western philosophy and religion.
In order to understand the complex relationship between performance and the social dynamics of sport, the sport, the social, and the economic aspects need to be considered. This is particularly true in the context of Olympic sports, where the pressure to perform at a high level is intense, and the social and economic consequences of success or failure are significant.
